33rd CENTR Technical workshop, Bucharest
15 November 2015
Evaluation report
20 replies on 25 participants
8. What topics would you like to see on the agenda of one of the next CENTR Security workshops?

RDAP extensions for ccTLDs (privacy considerations, extra contact data, etc...). / EPP extensions for authorization - 2 factors - non-registrar operations / Registry access for non-registrars, like webhosting companies (see Cloudflare blog, and CIRA draft). / IDN handling in relation to IETF LAGER WG / I am always very interested in (more) presentations about design and architecture of the Registration System and/or new features of the Registration system. Or things like deployment strategy. / Of course I am also interested in topics around operating the DNS but there usually is already a lot of focus on this side. / Perhaps something on the application stack used by registry systems?

9. Other general comments on this meeting?

On the one hand, it was a bit disappointing to see so few people at the meeting, but on the other hand, the small group increased interaction between the people that were there. / Attendance was lower than usual. Any ideas what might be the reason? Meetings on Sunday are of course less attractive, especially for people not attending the RIPE meeting. / Tour-de-table with one slide per TLD/participant (like for example done in the Admin WG) => pro's and con's? might take longer? => ask opinions on the mailing list? => ask feedback from the Admin WG? / The only comment I'd make would be regarding the agenda fixed a bit more ahead of time. / Thanks! The CENTR secretariat support for the meeting was highly appreciated.
